

# Scrum at a glance

## Definition

## ▶ Definition: Scrum

Scrum is a *lightweight framework*  
which helps people, teams and organizations generate  
*Value*  
*through adaptive solutions for complex problems.*

Scrum requires a person (Role/ Accountability: **Scrum Master**) to foster an environment where:

1. a person (Role/ Accountability: **Product Owner**) orders the work for a complex problem into a Product Backlog;
2. The **Scrum Team** turns a **selection of the work** (-> **Sprint Backlog**) into **an Increment of value** during a Sprint.
3. the **Scrum Team** and its **stakeholders** **inspect the results** and **adjust** for the next Sprint.
4. these steps are **repeated**
